

CABLE ROUTING IN WASTEWATER LIFT STATION**Abstract of the Disclosure**

A modular well for a wastewater lift station includes multiple well sections.

- 5 Each of the well sections has at least one mating feature allowing it to be joined to at least one other well section and to form a liquid tight seal. The well is formed by vertically mating the well sections together. One of the well sections has an inlet opening, and the same or a different well section has at least one outlet opening.
